

type: Assignment
track: "[[General AI Fluency]]"
week: 3
phase: Foundations
status: ● Complete
tags:
date: 17/07/02026
name: "Decide Once: Build Your Identity Kit"

Meta & Objectives

- **Why it matters:** A consistent look is what separates a portfolio that feels intentional from one that feels thrown together. The goal is to make a few visual decisions once so every page, case study, and project write-up feels connected.
- **The Brief:** Choose one or two free fonts, define a calm portfolio color palette, create a simple logo/favicon, and write a two-line style note that can be added to my Claude Project for future consistency.

The Deliverables

One-Page Identity Kit

Element	Decision
Portfolio name	Yora
Visual direction	Minimal cybersecurity / AI research portfolio
Heading font	Space Grotesk
Body font	Inter
Main color	#2563EB — calm technical blue
Near-black text	#111827 — dark slate
Near-white background	#F9FAFB — soft off-white
Accent color	#22C55E — controlled signal green
Logo / favicon concept	A clean monogram using the letter Y, inspired by a terminal cursor and network node shape
Mood	Technical, calm, precise, and research-oriented

Font Choices

Use	Font	Why
Headings	Space Grotesk	It feels modern and technical without looking too decorative. It works well for cybersecurity, AI, and engineering projects.
Body text	Inter	It is highly readable, clean, and professional for case studies, project pages, and technical explanations.

Font rule: Use Space Grotesk only for headings, navigation, and short labels. Use Inter for paragraphs, tables, project descriptions, and long-form writing.

Color Palette

Role	Hex code	Usage
Main color	#2563EB	Links, buttons, active states, important section markers
Text color	#111827	Main text, headings, body copy
Background	#F9FAFB	Main page background
Accent	#22C55E	Small highlights, status indicators, terminal-like details

Palette rule: The blue is the main identity color. The green should be used rarely, only for small technical highlights, so the projects remain the focus.

Logo / Favicon

Logo concept: A simple Y monogram inside a rounded square. The shape is intentionally minimal so it can work as a favicon, GitHub profile mark, or small portfolio logo.

```
<svg width="128" height="128" viewBox="0 0 128 128"
xmlns="http://www.w3.org/2000/svg">
  <rect width="128" height="128" rx="28" fill="#111827"/>
  <path d="M34 32L64 66L94 32" stroke="#2563EB" stroke-width="12" stroke-
linecap="round" stroke-linejoin="round"/>
  <path d="M64 66V98" stroke="#22C55E" stroke-width="12" stroke-
linecap="round"/>
  <circle cx="64" cy="66" r="6" fill="#F9FAFB"/>
</svg>
```

How to use it: Save the code as `favicon.svg` or export it as a PNG for the portfolio.

Two-Line Style Note for Claude Project

Use **Space Grotesk** for headings and **Inter** for body text. Use the palette #2563EB blue, #111827 near-black, #F9FAFB near-white, and #22C55E as a rare technical accent.

The visual mood should be calm, precise, and research-oriented: cybersecurity and AI portfolio energy, but minimal enough that the projects stay louder than the design.

Track Thread Summary

For my Week 3 identity kit, I chose a minimal technical direction for my portfolio.

My heading font is **Space Grotesk**, and my body font is **Inter**. The palette is intentionally tight: #2563EB as the main blue, #111827 for near-black text, #F9FAFB for a soft near-white background, and #22C55E as a small signal-green accent.

The logo/favicon is a simple **Y** monogram inside a rounded square, inspired by a terminal cursor and network-node shape. The goal is a calm cybersecurity/AI research identity: technical, precise, and clean, without making the design compete with the actual work.

AI Collaboration Log

- **Initial Draft / Thought Process:**
 - I wanted the identity to fit my actual work: cybersecurity, AI, RAG systems, CTFs, and research projects.
 - I did not want something too colorful, trendy, or "startup flashy," because the portfolio should make the projects look serious and credible.
 - **The Friction Points:**
 - The main challenge was choosing a palette that feels technical without looking aggressive or dark-only.
 - Another friction point was keeping the logo simple enough to work as a favicon instead of overdesigning it.
 - **Refinements Made:**
 - I limited the kit to two fonts only: one heading font and one body font.
 - I kept the palette to four colors.
 - I chose a simple monogram instead of a complex symbol so it can scale down cleanly.
 - I wrote the Claude Project style note as an instruction that can guide future portfolio pages and case studies.
-

Playbook & Next Steps

- **Submit:** Post the identity kit summary to the official track thread.
- **Claude Project:** Add the two-line style note to the Claude Project instructions.
- **Portfolio Alignment:** Use this palette and typography in the portfolio homepage and future case studies.
- **Favicon:** Save the SVG logo as `favicon.svg` and add it to the portfolio project.
