

# Week 1

## Draw the Path - Portfolio Sitemap & Toolkit Setup

**Track:** General AI Fluency

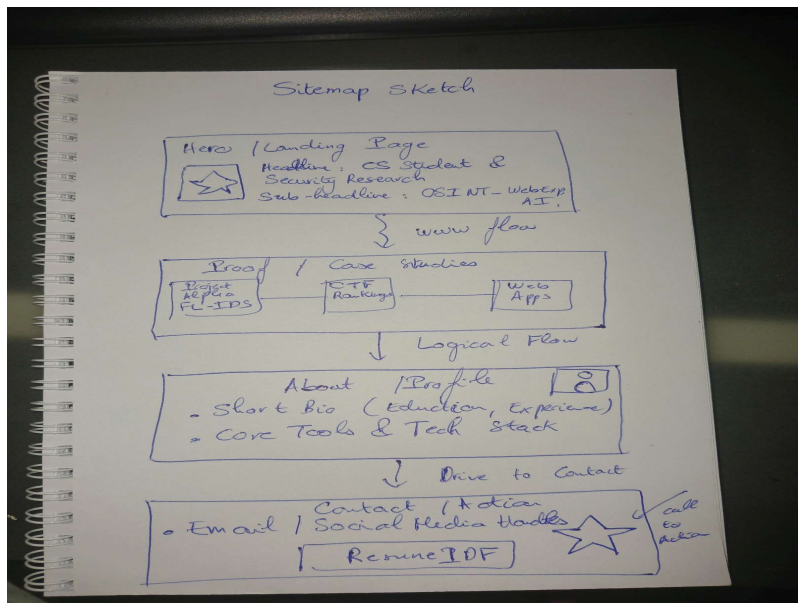

**Workload:** 3h

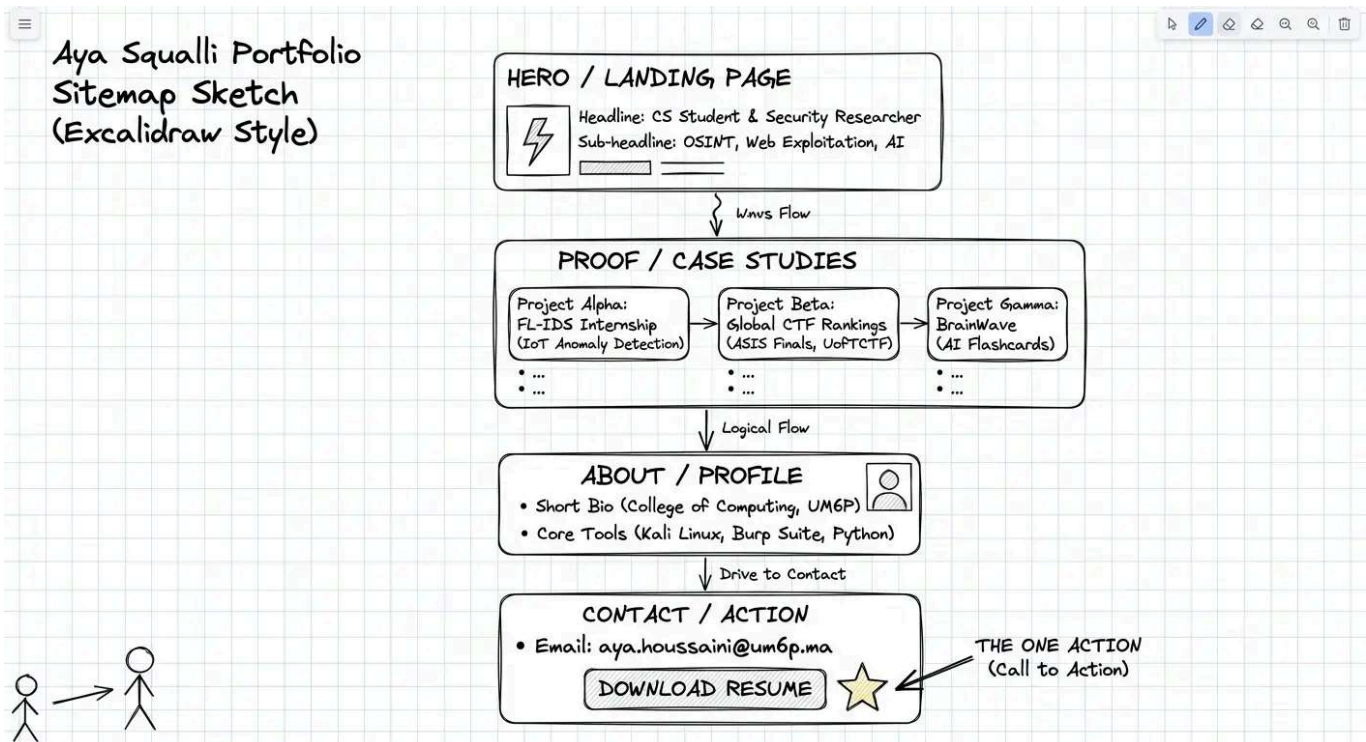

**Status:** Done

### I. Strategic Foundation

- **Primary Claim:** I am a Computer Science engineering student and active security researcher specializing in OSINT and Web Exploitation. I validate my technical competencies through consistent top placements in global CTF competitions and hands-on experience engineering advanced solutions, such as a Federated Learning-based Intrusion Detection System (FL-IDS).
- **Primary Action (Conversion Goal):** To facilitate direct contact from technical recruiters or project collaborators regarding internship opportunities and engineering roles.

### II. Sitemap Architecture

### 1. Hero Section (Landing):

- **Headline:** Computer Science Engineering Student & Security Researcher.
- **Sub-headline:** Specializing in OSINT, Web Exploitation, and AI-Driven Systems.

### 2. Case Studies (Proof of Competency):

- **Project Alpha:** FL-IDS Research Internship (Edge device anomaly detection).
- **Project Beta:** Competitive Security Rankings (ASIS Finals, UofTCTF).
- **Project Gamma:** BrainWave (Full-stack AI development).

### 3. About (Professional Profile):

- **Academic Context:** College of Computing, UM6P.
- **Core Technical Stack:** Kali Linux, Burp Suite, Python, C++.

### 4. Contact (Action Execution):

- **Call to Action:** Direct email communication ([Aya.HOUSSAINI@um6p.ma](mailto:Aya.HOUSSAINI@um6p.ma)).
- **Frictionless Conversion:** Single-click resume download.

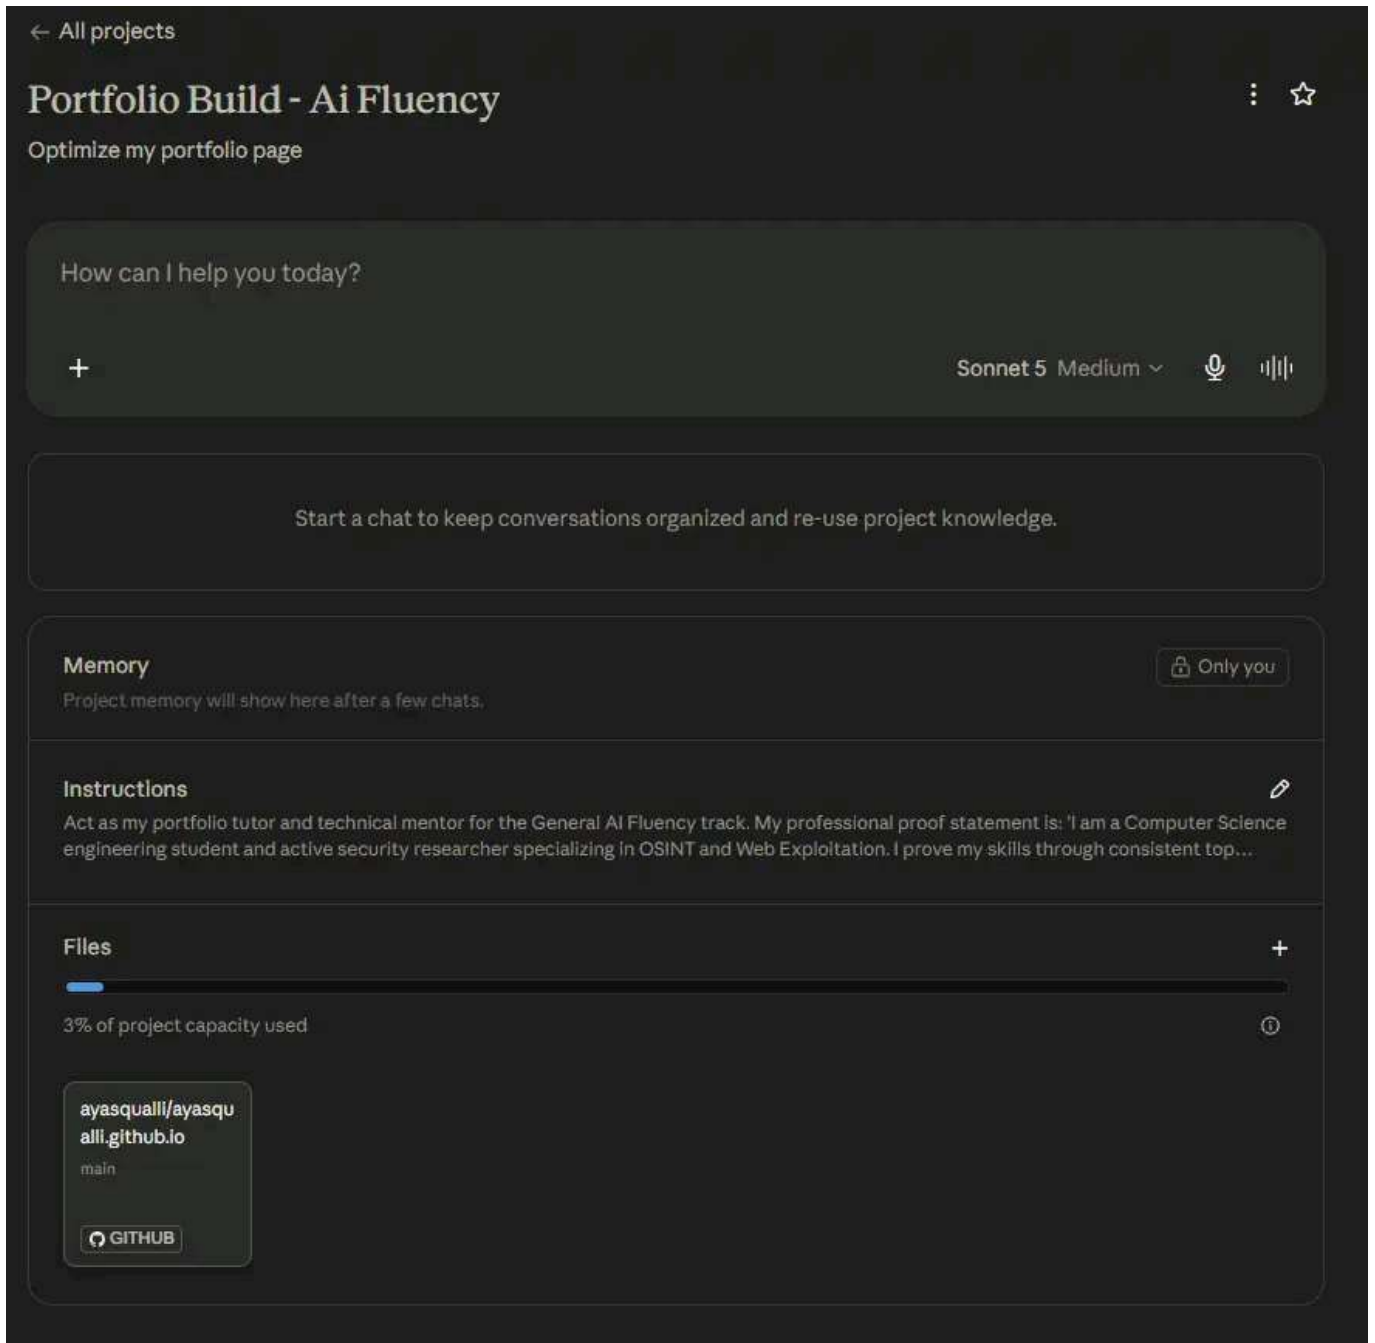

## III. Environment & Toolkit Configuration

- ✓ ChatGPT environment active. ✓ 2026-07-07
- ✓ Gemini environment active. ✓ 2026-07-07
- ✓ Perplexity environment active. ✓ 2026-07-07
- ✓ Claude environment active and configured. ✓ 2026-07-07
  - ✓ Created dedicated workspace: **Portfolio Build - AI Fluency**. ✓ 2026-07-07
  - ✓ Initialized Custom Instructions (System Prompt). ✓ 2026-07-07
  - ✓ Pending Deliverable: Screenshot of configured Claude Project settings. ✓ 2026-07-07

## Claude System Instructions

Act as my portfolio tutor and technical mentor for the General AI Fluency track. My professional proof statement is: 'I am a Computer Science engineering student and active security researcher specializing in OSINT and Web Exploitation. I prove my skills through consistent top placements in global CTFs and hands-on experience developing advanced solutions like a Federated Learning-based Intrusion Detection System.'

Follow my progress for the next eight weeks. Your objective is to refine my messaging, pressure-test my structural assumptions, and ensure every element of my portfolio drives users toward my primary conversion metric: direct contact for technical internships and collaborations.

## IV. System Pressure-Test (Initial Validation)

- ✓ Execute the validation prompt within the configured Claude Project. ✓ 2026-07-07
- ✓ Document and implement at least one structural optimization based on output. ✓ 2026-07-07
- ✓ Pending Deliverable: Screenshot of the prompt execution and corresponding AI output. ✓ 2026-07-07

## Validation Prompt

Here is my proposed minimalist sitemap designed to drive visitors toward my primary conversion goal (direct email contact for an internship/collaboration):

1. Hero: Articulates my value proposition as a CS student and competitive security researcher.
2. Proof: Highlights my FL-IDS internship, top CTF rankings (ASIS, UofTCTF), and one full-stack AI project.
3. About: A highly condensed professional biography emphasizing my academic institution and core operational tools (Kali Linux, Burp Suite, Python).
4. Contact: Direct email routing and a standardized resume download button.

Pressure-test this sitemap architecture against my proof statement and my primary conversion goal. Identify any user friction points, critical missing elements necessary for technical recruiters to validate my claim, or structural bloat that requires removal.

## Execution Notes & Required Revisions

Good — this is exactly the kind of thing worth pressure-testing before you build it, not after. Let me go through your sitemap against your proof statement and your actual live site (which gives me a lot to work with), then set up how we'll run the next 8 weeks.

## Verdict on the sitemap

The four-page funnel (Hero → Proof → About → Contact) is the right shape for a conversion-focused portfolio. But right now there's a gap between what your proof statement *claims* and what your evidence *shows*. A technical recruiter reading "OSINT and Web Exploitation specialist" is going to go looking for confirmation, and several places they'd look either don't exist yet or contradict the claim.

## Friction points and gaps

### 1. Your specialization claim isn't backed by category-level evidence.

Your proof statement says "OSINT and Web Exploitation." Your CTF highlights (MCSCv13, ASIS, UofTCTF, Kaspersky) list overall rankings but not category breakdowns. One entry even says you solved "crypto, RE, forensics and web" — which reads as generalist, not specialist. If you want the specialist claim to survive scrutiny, the Proof section needs a line like "Consistently top-3 in Web Exploitation category across X CTFs" or it needs to drop the specialization language and say "broad CTF competitor with strength in web exploitation," which is a weaker but honest claim. Pick one and make the evidence match it — don't leave the mismatch for the recruiter to notice.

### 2. No verifiable, click-through proof of ranking claims.

Numbers like "34th/476" or "24th/1550" are unverifiable as plain text. Recruiters validating a security claim want a CTFtime profile, an HTB profile, or a scoreboard link. This is a **missing element**, not a nice-to-have — it's the single highest-leverage addition for your conversion goal, because it's the difference between "claims" and "proof."

### 3. FL-IDS — your flagship proof point — has no artifact link anywhere on the site.

It's described in prose in the resume section but there's no repo, writeup, poster, or demo linked. Right now a recruiter can't actually inspect the thing you're using as your strongest evidence of "advanced solutions." This needs a link before it goes into a condensed "Proof"
