Assignment: What Are You Proving?

The One-Paragraph Proof Statement

I can discover critical security vulnerabilities in web applications using advanced OSINT and Web Exploitation techniques. This portfolio is engineered specifically for a Lead Red Team Engineer or technical security recruiter looking to bring on a highly analytical offensive security intern. The absolute primary action I want them to take after arriving on my page is to click the "Get in Touch" button and email me to coordinate a technical screening.

The One-Line Why

A traditional CV or LinkedIn profile can list my certifications and match keywords, but it completely fails to visualize my investigative methodology, show the depth of my CTF writeups, or prove my ability to map out complex attack surfaces in a real-world environment.

Self-Correction & Verification Checklist

- ✓ ~~Single Primary Claim?~~ Yes. Focused exclusively on discovering vulnerabilities via OSINT/Web Exploitation (Offensive Security). No distracting secondary claims hiding behind an "and".
- ✓ ~~Specific Target Audience?~~ Yes. Targeting a Lead Red Team Engineer or technical security recruiter, not just a generic "hiring manager."
- ✓ ~~Single Core Action?~~ Yes. Clicking the CTA to email for a technical screening.
- ✓ ~~Unique to Me?~~ Yes. Anchored explicitly to mapping attack surfaces and displaying live CTF/OSINT methodologies.
